

LAPID DRIVER APP

The Lapid Driver App assists fleets to check driver's licenses. With just a few clicks, drivers can initialize the check of German or Austrian driver's licenses anytime, anywhere. The license check is documented in the Lapid customer system.

Verification process

- Install the Lapid Driver App on your smartphone. It is available for iOS and Android devices and can be downloaded from the Apple App Store and Google Play Store.
- In the event of an upcoming check, drivers receive an e-mail, SMS or push notification reminding them to check their driver's license with the Lapid Driver App.
- Next, the drivers start the driver's license check in the Driver App and take a photo of their driver's license with the smartphone's camera. The photo must contain the holograms on the driver's license. These and other relevant information on the driver's license are transmitted to the Lapid system for verification.

Secure verification via the Driver App

Tamper protection is an important factor in performing a legally compliant driver's license check. To ensure security, Lapid uses a multi-stage checking procedure that verifies the authenticity of the driver's license after initialization of the license check via the Driver App. After the check, the drivers are informed about the result and the transferred photos are deleted from the Lapid server. The successful license check is documented in the Lapid customer system.

The Lapid Customer System

The Lapid customer system is used for the administration of driver's license checks. All driver data is stored there and can be edited. Each driver's license check is automatically recorded and can be viewed. The reporting functions provide an overview of all overdue drivers.

INDEPENDENT CHECK BY THE DRIVER

With the Driver App, drivers check their driver's licenses independently with their smartphone.

ANYTIME, ANYWHERE

Drivers can easily check their driver's license at any time – at home or on the go.

MULTI-STAGE TEST PROCEDURE

The actual check is performed downstream in a multi-stage checking procedure by trained Lapid agents.
