

LAPID LABEL

The Lapid label is based on RFID technology and is absolutely forgery-proof and tamper-proof. The Lapid label solution enables vehicle fleets to check their employees' drivers' licenses. All driver's licenses can be checked by showing the license at an checking station.

Affixing the Lapid label to a driver's license

An authorized person, such as the fleet manager, affixes the label to the driver's license. They must ensure that all important entries such as the driver's license number, name of the license holder and issuing authority remain legible. The German Federal Ministry of Transport has certified that applying the Lapid label is legal. The authorized person should test that the label functions correctly to ensure that the application was successful. All they need to do is hold the label in front of a checking station or a Lapid RFID reader. In the final step, they must assign the label to the corresponding driver in the Lapid customer system. The driver's license check using the Lapid label can be done at any of the more than 1,200 checking stations throughout Germany. You can find the checking station nearest to you using the station finder or the Driver app.

Verification procedure

The driver's license check using the Lapid label can be done at any of the more than 1,200 checking stations throughout Germany. You can use the [station finder](#) or the Driver app to find your nearest checking station.

Data protection and privacy

The Lapid label is continuously operational due to an integrated passive RFID chip, it does not actively send any signals itself. Thanks to its special design, the label will not be destroyed by everyday use including abrasion or pressure. For legal reasons and as a safety precaution, however, the label contains a predetermined breaking point. If an attempt is made to remove the label from the driver's license, the predetermined breaking point will destroy the label. The driver's license check with the Lapid label is equivalent to a visual inspection.

The Lapid customer system

The Lapid customer system is used for the administration of driver's license checks. All driver data is stored here and can be edited. Each driver's license check is automatically recorded and can be viewed. The reporting functions provide an overview of all drivers who have not yet complied with the license check.

CAN BE USED FOR ANY DRIVER'S LICENSE

Whether a driver's license is in card or paper form, every license can be verified (including foreign driver's licenses).

GERMANY-WIDE NETWORK OF CHECKING STATIONS

Throughout Germany, 1,200 checking stations are available for check with the Lapid label.

TAMPER PROTECTION

In order to provide protection against tampering, the label is equipped with predetermined breaking points that destroy its chip when it is removed.
